

## Before WAND Taxonomy and DataFacet

The screenshot shows a SharePoint 2013 search interface. At the top, the 'SharePoint' logo is on the left, and a search bar contains the text 'federal reserve'. Below the search bar are navigation links: 'Everything', 'Finance', and 'Back to Docs'. The search results are organized into columns: 'Result type', 'Author', and 'Modified date'. The 'Result type' column lists 'PDF' and 'Web page'. The 'Author' column lists various roles like 'System Account', 'Federal Reserve Staff', and 'Jeffrey A Burinda'. The 'Modified date' column includes a bar chart and a timeline from 'One Year Ago' to 'Today'. The search results list several PDF documents related to the Federal Reserve, including bluebooks and financial conditions reports. At the bottom, there are pagination controls showing '1 2' and a right arrow, and a message 'About 1,101 results'. Below the results are links for 'Alert Me', 'Preferences', and 'Advanced Search'.

*This is a search in SharePoint 2013 without taxonomy or metadata tagging. The keyword search returned 1,101 results which can only be filtered by author, date, and file type. The user does not have the ability to narrow results based on the topic of the documents.*

This is the same search in SharePoint 2013 after a WAND Taxonomy and DataFacet automatic tagging have been applied. Shown in the yellow box, the user can now filter the search results using highly relevant business terminology to narrow the number of results to a manageable number in just a few clicks. Using a WAND Foundation Taxonomy and DataFacet automatic tagging significantly improves a user's ability to find relevant information.
